

BATTERY ELECTROSTATIC SPRAYER

KRD-AP129-2B

Portable and
manageable.

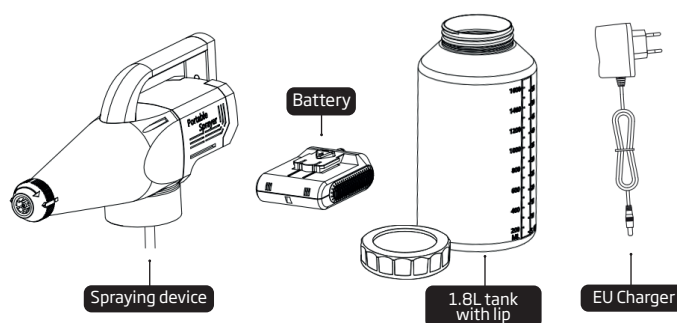

Rechargeable battery
2500mAh.

Capacity 1,8L.

SPECIFICATIONS

Liquid capacity	1800ml
Atomised volume	70ml/min
Effective range	3m
Voltage	20V
Motor Power	129W
Operating time	25 - 35 minutes
Charger input	AC 100-240V 50hz/60hz
Charging time	3,5-4 hours
Noise level	70DB
NET weight	1,3kg
Size	326 x 81 x 150,5mm
P.V.P. (VAT no inc.)	133,00€

APPLICATIONS

Disinfection of all types of public and private spaces: offices, shops, gyms, sports centers, swimming pools, bars, restaurants, hairdressers, beauty salons, veterinary centers, ports, airports, hotels, hospitals, vehicles, public transport, etc ...

DESCRIPTION

The electrostatic atomizer sprayer with a 129W motor generates a fine electrostatic mist, 1.8L tank capacity, 2500mAh rechargeable battery to spray and apply the disinfectant, it is portable and manageable, it creates a very fine water mist that is a simple and practical way applying disinfection.

Why is it recommended to use this battery sprayer?

It generates a fine electrostatic mist with a high concentration of negatively charged anions, the suspended particles in any space contain viruses and bacteria in the air that are positively charged, by spraying with the anions from the nebulizer it is possible to neutralize the positive charge of viruses and bacteria in suspension, by neutralizing their load, they increase their weight to settle on the ground and surfaces, combined with the disinfectant chemical solution we will achieve the neutralization and deactivation of viruses and bacteria in an easy and effective way.
